

Hydranautics - A Nitto Group Company's Brand Identity System Guidelines

Version 1.0
2014.7.1

Introduction

Welcome to the Hydraulics Brand Guidelines

The Hydraulics Brand Identity Guidelines establish the rules for displaying the logo and other branding in a desirable form with the aim of achieving broad appeal. These guidelines are intended to serve as the core in unifying Hydraulics visual identity as part our corporate branding strategy.

Only by maintaining a consistent visual identity will we become a globally recognized company.

Therefore, we ask that you refer to these guidelines and comply with their contents whenever the using the Hydraulics brand.

Brand Colors

The Nitto Brand Colors are 'Nitto Blue' and 'Nitto Red'. The Hydranautics Brand Colors are 'Hydranautics Sky Blue' and 'Nitto Blue'. These are the colors used in the logo. Please adhere to the color specifications below. Exceptions are allowed only in special circumstances.

Brand Colors Nitto

Nitto Blue
PANTONE 2746 C
Process: C100 + M90
RGB: R23 G28 B143
HTML: 171C8F

Nitto Red
PANTONE 1795 C
Process: M100 + Y100
RGB: R210 + G38 + B48
HTML: D22630

Brand Colors Hydranautics

Hydranautics Sky Blue
PANTONE 3005 C
Process: C78 + M23
RGB: R24 G158 B217
HTML: 189ED9

Nitto Blue
PANTONE 2746 C
Process: C100 + M90
RGB: R23 G28 B143
HTML: 171C8F

Display Nitto

■ K100 ■ K80

The monochrome logo must be displayed using only K100 and K80.

Display Hydranautics

■ K100 ■ K60

The monochrome logo must be displayed using only K100 and K60.

When using the logo in the production of goods, please use the official brand colors as seen above. The official brand colors must be specified using the designated PANTONE colors.

If for some reason you are unable to use the PANTONE colors, you may use the Process colors as a substitute. However, when doing so, please ensure the results are as accurate to the official brand colors as possible.

Prohibited Use of Logo

Incorrect use of the logo can result in damage to our brand identity and corporate image. Please use caution and refer to the following guidelines when using the logo.

Do not change the balance, tracking, or positioning of the characters.

Do not apply shadows

Do not render in colors other than the official brand colors.

Do not skew or rotate.

Do not apply highlights or other enhancements.

Do not place graphic elements within the isolation area.

Do not cut or trim.

Do not change the tint of an characters in the monochrome logo.

Do not place against high contrast backgrounds.

Do not place against backgrounds with complicated patterns.

Do not display in outline form.

Do not use the in the body of text documents

HYDRANAUTICS
Nitto Group Company

Nano-SW

NF Membrane Technology for Sulfate Removal Process in Oil and Gas Industry

When high rejection of Sulfate is required under demanding conditions, the Nano-SW membrane from Hydranautics - A Nitto Group Company sets new standards for high Sulfate rejection combined with lower biological fouling.

Everyday new advancements are made in offshore oil drilling technology to keep pace with the rapid increase in global demand for oil. But the operation of an offshore oil well entails a significant investment because of the logistical and operational challenges involved. If the oil well were to face frequent downtime on account of inefficient processes, it would have a significant negative impact on the entire operation, increasing the costs.

This situation can arise when sea water injection is used in offshore oil wells. The presence of sulfate in the sea water leads to problems like scale formation and reservoir souring.

The Nano-SW offers the perfect solution for this problem. It not only offers a higher rejection of Sulfate at 99.8%, but it is a significantly more robust membrane with the enhanced ability to fight off biofouling. This translates into fewer number of cleanings and reduced downtime for your oil well operation!

Seawater Injection in Offshore Oil Well:

In offshore oil production, sea water is injected into the oil reservoir, increasing the pressure and thereby stimulating and increasing the oil production.

The Water Injection Technique:

The Sulfate content in seawater is usually 2500 ppm to 3000 ppm SO₄. This can lead to scale formation and/or reservoir souring in the following manner:

Scale Formation:

Reservoir souring:

Nano-SW Features

- Superior Selective Membrane Chemistry
- High Sulfate Rejection – 99.8%
- Maximal Flow
- Low-Fouling Feed Spacer Design
- HYDRABlock™ Antibacterial Technology

Performance:

MgSO₄	
Permeate Flow (Nominal):	11,000 gpd (41.7 m ³ /d)
MgSO ₄ Rejection (Nominal):	99.8%
MgSO ₄ Rejection (minimum):	99.6%
Seawater	
Permeate Flow* (Nominal):	6,500 gpd (24.6 m ³ /d)
Cl ⁻ Rejection* (Nominal):	25%
SO ₄ = Rejection (Nominal)	99.8%

* All elements are tested with MgSO₄ in Hydranautics' wet test OC. Seawater performance is for reference purposes.

Test Conditions:

The stated performance is based on the following test conditions:

MgSO₄	Seawater
2000 ppm MgSO ₄	35,000 ppm NaCl + 8000 ppm MgSO ₄
130 psi (0.9 MPa) Applied Press	200 psi (1.4 MPa) Applied Press
77 °F (25 °C) Operating Temp	77 °F (25 °C) Operating Temp
15% Permeate Recovery	15% Permeate Recovery
6.5 – 7.0 Feed pH	6.5 – 7.0 Feed pH

Advantages:

- High sulfate rejection - permeate will not form scale when mixed with groundwater containing barium.
- High sodium and chloride passage minimizes the increase in osmotic pressure leading to lower pressures.
- Innovative feed spacer design prevents trapping of colloidal particles and reduces the colloidal fouling of the NF membranes.
- Novel HYDRABlock™ Technology (patent pending) provides the biostatic properties to retard the growth of bacteria and reduce biological fouling.
- The lower fouling and easy cleanability ensure that the membrane provides optimal and consistent performance throughout the membrane's life.

Hydranautics - A Nitto Group Company is a global leader in research, including reverse osmosis, nanofiltration, ultrafiltration, and microfiltration. Our membrane products (CPA, ESPA, LFC, SWC, ESNA, HYDRAcap, HYDRAcap MAX and HYDRASub) are used extensively in municipal & industrial water and wastewater treatment.

With a rich experience of 5 decades in the membrane technology arena, we at Hydranautics - A Nitto group company are committed to creating innovative membrane technologies which provide clean water to a thirsty world.

Our global membrane division is headquartered in Oceanside, CA, USA. With three state-of-the-art manufacturing sites located in Oceanside - CA - USA, Shiga - Japan and Shanghai - China, Hydranautics has a combined manufacturing area in excess of 131,000 m² (1,400,000 ft²). Our world-wide sales and customer service offices are located throughout Europe, Asia, the Middle East, North America and South America.
