

We Make Life Better

In Gran Canaria, Spain fresh water is limited by a scant 250mm of rainfall per year. New technologies had to be found to irrigate the vegetable fields of this arid island paradise.

At Hydranautics/Nitto Denko, we came up with a way to help: by integrating our unparalleled desalination technology with wind power energy to harness the potential of the surrounding ocean and the ever-present Atlantic breezes. The result -- clean water for irrigation -- and great tomatoes.

***Put our high performance
SWC3+, SWC4+ and SWC5 desalination
membranes to work for you.***

**Innovations. Flexible Solutions.
Real Relationships. Global Responsibility.
Unwavering Integrity.**
