

We Make Life Better

Global Responsibility. Real Relationships. Hydranautics puts their patented technologies to work to make clean water a reality for every community and industry around the world. Call or e-mail us for customer support or technical advice - you'll be assisted by real people with real solutions.

Unwavering Integrity. With roots back at Hydranautics, we're owned by Japanese parent company, Nitto Denko, and we strive to embody the traditional Asian meaning of bamboo: longevity, strength, dignity and integrity.

Innovations. To date, Hydranautics/Nitto Denko holds **24 patents** in membrane interfacial surface coating and elements fabrication technology - more than any other membrane manufacturer. Our focus is on membrane integrity.

Proven Solutions. Hydranautics' innovative membranes were selected to supply the Fujisaki, U.S.A. seawater desalination project. The plant consists of 75 MWED of WFO (Multi Stage Flow) and 40 MWED of SWRO capacity for the production of potable water. Fujisaki is the largest hybrid WFO-RO installation as well as one of the largest SWRO plants in the world. The design of the hybrid system allows power plants to maximize and balance the use of power, water consumption and water quality to produce the best performance at the lowest operating costs.

Membranes are our business, meeting customer needs is our first concern, and leading the industry in film technology is our primary focus.
